Cortland, NY April 4, 2007 - WetStone Technologies, Inc. is proud to announce Gargoyle Investigator™ Version 3.0. WetStone's Gargoyle Investigator™ application is a popular digital investigation tool that provides investigators with the ability to triage computers for the presence of malware, (**malicious software**).

One of Gargoyle's top features includes a capability to now conduct a quick search not only on a stand-alone system but now the ability to scan a single remote system for known contraband. This feature was previously only available in the Gargoyle Investigator™ Enterprise Edition and now all customers will have this option allowing a quick search across your network.

We have in addition enhanced the scan capabilities so that Gargoyle is now able to successfully scan archive files supporting the most popular requested file types including .zip, .rar, .jar, and more.

This version of Gargoyle is now able to support Windows Vista and we have significantly increased scan speed (up to 25% faster) with better memory utilization. Modifications made to the Gargoyle Evidence Report allow users to incorporate a timestamp into scan details that is traceable to Universal Coordinated Time (UTC), the official time source of the world. This traceability back to UTC significantly improves the integrity of any digital evidence collected.

"The release of Gargoyle Investigator™ Version 3.0 marks a major advance in the core Gargoyle scanning engine in addition to many user requested capabilities including separation of scan media details and updated drive image mounting software," stated Mark Reilly, Vice President of Research and Development.

About WetStone Technologies, Inc. - WetStone Technologies, Inc. was established in 1997 to advance digital investigation technologies and training. WetStone is a market leader in steganography investigation, cyber-weapon search and seizure and live digital investigation.
