Cortland, NY – August, 2006. WetStone Technologies, Inc., a leading producer of digital forensic investigations products is proud to announce the availability of its latest training course – Malware Investigator Boot Camp.

The Malware Boot Camp is an advanced two day intensive training course that includes hands on lab, examination, and certification. Each student is provided their own investigative workstation. They will receive fully licensed copies of WetStone's Gargoyle Investigator™ *Enterprise Edition* and training materials. Upon completion of this intense Malware Investigator Boot Camp, students will gain detailed experience with: Botnets, Trojans, Root Kits, Worms, Password Crackers, Evidence Countermeasures, Keyloggers, Steganography, Encryption, and Fraud Tools among others.

"The investigation of malware uses and infection is critical to every investigation. Without this, crucial evidence can be missed which opens the opportunity for the defense to claim the 'Trojan Defense', our ability to routinely audit our enterprise for the presence of malicious software dormant or active has become a necessary pre-emptive step in defending the enterprise", stated Chet Hosmer, Chief Scientist and CEO of WetStone Technologies.

Gargoyle Investigator *Enterprise Edition* is a software tool which provides the ability to conduct a quick search on a stand-alone system or network resource for known contraband and hostile programs using datasets specifically designed to uncover them. Gargoyle provides the technology necessary to detect, collect, analyze and preserve the findings that can be admissible in court, which ultimately results in the ability to prosecute or institute disciplinary action.
